# What type of software development service do you need?

Different types of software development project require different strategies and project management.

Follow this simple flow chart to determine what you need.

Are you a startup or an existing company?

Startup   **Existing**

Do you need software for your current business?

Or is it for a new business idea?

New   **Current**

Startup Software Development Process

Create an MVP (Minimum Viable Product) to learn whether customers will pay for the product or service.

Is your current business system custom software?

Or is it manual (paper forms, spreadsheets, etc)?

Software   **Manual**

Does your current software work OK overall?
Maybe just needs a few new features and some bugs fixed.

Or does it have major flaws?

Works OK   **Major Flaws**

Do you have the source code# for your software?

Yes   **No**

Software Maintenance

Add Features, Fix Bugs, Monitor Performance.

New Software Development Process

Analysis and Design, Documentation, Project Management, Development, Testing, Deployment, User Manuals / Training

---

Knowing what type of software development project you have will help us to recommend an appropriate course of action.

Custom Software and Databases

Footnote:
source code is the programming code created by the developer of your application.
It is not required for you to use the application but it is required to make programming changes.
